

AMAR JAISWAL

Lead AI Engineer | Senior Backend Architect

aj.jaiswal007@gmail.com • [linkedin.com/in/amar-jaiswal-065b37112](https://www.linkedin.com/in/amar-jaiswal-065b37112) • aj-jaiswal007.github.io

ABOUT ME

AI Engineer with 7 years of experience building scalable microservices, developer platforms, and enterprise AI infrastructure. Expert in designing distributed systems, B2B SaaS applications and architecting execution layers for production-grade RAG and Agentic workflows.

SKILLS

Programming Languages: Python, Java, Javascript, Go

Frameworks & Technologies: FastAPI, Django REST, Kubernetes, Helm, ArgoCD, Terraform, Anyscale, GitHub Actions, Prometheus, Loki, Envoy Proxy, GenAI, LLMs, LLM Agent Frameworks, RAG, Vector Databases, MongoDB, Celery, RabbitMQ, Redis, Kafka.

Technical Skills: System Design, AI/ML Platform Engineering, Microservices, Distributed Systems, CI/CD Architecture, Infrastructure as Code, Multi-Tenant Architectures, Event-Driven Architectures, Database Design, OOPs, REST, SOLID.

Cloud/Deployment: AWS (EKS, GWLB, IAM, ECR, EC2), Docker, Jenkins, Azure, GCP.

PROFESSIONAL EXPERIENCE

Tripadvisor ([tripadvisor.com](https://www.tripadvisor.com)) • 2 Years

Software Engineer II (AI Engineer)

Jul 2024 - June 2026

- **Developed the core framework** for the enterprise Agentic Intelligence Platform on Anyscale, implementing distributed backend orchestration, low-latency API contracts, and high-performance routing proxies to power next-generation AI initiatives.
- Designed and engineered **centralized platform libraries** that standardized **LLM orchestration, A/B experimentation engines, observability, event tracking** and **secure secrets management** across all production AI microservices.
- Built a high-scale, self-service AI application runtime utilizing **custom backend templates** and **standardized distributed configurations**, accelerating time-to-market for production **Agentic workflows by 90%**.
- Drove platform cost optimization of **70-80% through data-driven load testing** and resource right-sizing across AI services, while owning production reliability via **on-call rotation and incident response**.
- Led cross-team adoption of the platform across DSML and MLOps teams, **mentored 3+ engineers** through onboarding and knowledge transfer, and **authored internal technical documentation and blogs** to scale platform knowledge.

Certa ([certa.ai](https://www.certa.ai)) • 1 Year 6 Months

Senior Backend Engineer

Feb 2023 - Jul 2024

- **Led AI engineering** efforts within the backend team, building **GenAI applications** using **RAG, LLMs, Agents**, and **Vector Databases**.
- Architected the semantic search and retrieval layer using Vector Databases and RAG pipelines, ensuring highly contextual and accurate prompt-engineering outputs for agent execution.
- Built an **NLP-based Solution Designer Assistant** from scratch that auto-generates workflows on command, **reducing solution turnaround time by 60%** — a key contributor to the company raising **Series B** funding of **\$35 million**.

CAW Studios Pvt Ltd ([cawstudios.com](https://www.cawstudios.com)) • 3 Years 6 Months

Senior Backend Engineer

April 2022 - January 2023

- **Led a high-performing** cross-functional **team of 4 Backend and 4 Frontend Engineers** at [interakt.shop](https://www.interakt.shop) owning technical direction and delivering critical system features.
- **Redesigned a legacy messaging service** from a **monolith to serverless architecture** utilizing **pub-sub patterns**, successfully scaling **WhatsApp Notification Delivery 50x to achieve 50 TPS per tenant**.
- Optimized AWS cloud account syncing microservice for [clouddefense.ai](https://www.clouddefense.ai), **reducing syncing time by 75%**, and **built ETL data pipelines to scrape CVE data** at scale from multiple vulnerability sources.

Software Development Engineer II

April 2020 - March 2022

- **Owned the architectural evolution** of [interakt.shop](https://www.interakt.shop)'s core modules, leading a team of 10+ engineers to scale the platform from **MVP to enterprise-grade**, successfully supporting **3,000+ paying customers** and **generating ₹5M MRR**.
- Continuously evolved the product's architecture and **improved the performance of the APIs to save costs by 20%**.

Software Development Engineer

August 2019 - March 2020

- Built chatbots & integrated third-party chat applications for [haptik.ai](https://www.haptik.ai) which helped customers automate more than **50% of customer queries increasing ROI** and boosting agent productivity.
- Developed an OCR Template Reader to extract structured data from passports and insurance claims, achieving over **90% accuracy** in information extraction from PDFs and images.
- Created a Real-Time Automated Email Processing Interface using NLP APIs **that resolved customer queries 10X faster**.

EDUCATION

B.Tech in Computer Science & Engineering

August 2015 - July 2019

Dr. APJ Abdul Kalam Technical University (SRGI, Jhansi)
